Aims and scope

INTERNATIONAL MICROBIOLOGY, the official journal of the Spanish Society for Microbiology (SEM), aims to advance and disseminate information in the fields of basic and applied microbiology among scientists around the world. The journal publishes two kinds of contributions: Articles (reviews, research articles, and research notes) and Complements (editorials, perspectives, opinions, book reviews, obituaries, etc). A feature of INTERNATIONAL MICROBIOLOGY that distinguishes it from many other microbiology journals is a broadening of the term “microbiology” to include eukaryotic microorganisms (protists, yeasts, molds), as well as the publication of articles about microbiologists and their work and questions related to the history and sociology of this science. It offers short publication times and a complete copy-editing service. The journal encourages submissions in the following areas:

• Microorganisms (prions, viruses, bacteria, archaea, protists, yeasts, molds)
• Microbial biology (taxonomy, genetics, morphology, physiology, ecology, pathogenesis)
• Microbial applications (environmental, soil, industrial, food and medical microbiology, biodeterioration, bioremediation, biotechnology)
• State of the art of microbiology in different regions of the world
• Outstanding microbiologists
• Microbiology and education
• The history and sociology of microbiology

Disclaimer

While the contents of this journal are believed to be true and accurate at the date of its publication, neither the authors and the editors nor the publisher can accept any legal responsibility for any errors or omissions that may be made. The publisher makes no guarantee, expressed or implied, with respect to material contained herein.

Subscription information

ISSN print edition 1139–6709
ISSN electronic edition 1618–1905
Volume 10 (4 issues) will appear in 2007
Recommended annual subscription rate incl. Basic LINK license: 300.00 € plus carriage charges. Single-issue prices are available upon request. SAL delivery (surface airmail lifted) is mandatory to Japan, North & South East Asia, India, Australia and New Zealand. Customers should ask for the appropriate price list. Airmail delivery to all other countries is available upon request. Orders or claims can either be placed via a bookseller or sent directly to:

BOOK REVIEWS
71, 72, 74, 75

Online edition: http://www.im.microbios.org
International Microbiology is the official journal of the Spanish Society for Microbiology (SEM). The first journal published under the auspices of the SEM was Microbiología Española, which was launched in 1947. From 1985 until 1998, the journal was called Microbiología SEM. In 1998, the title was changed to International Microbiology. The journal addresses the international scientific community and publishes two types of contributions: Articles and Complements. Articles may be reviews, research articles, or research notes. Complements may be editorials, perspectives, opinions, book reviews, obituaries, etc. The fields covered by International Microbiology are: microorganisms, both prokaryotes and eukaryotes (viruses, bacteria, archaea, protists, yeast, molds), microbial biology (physiology, ecology, morphology, taxonomy, genetics, pathogenesis), and microbial applications (environmental, soil, industrial, food, medical microbiology, biodegradation, bioenergy, biotechnology). Papers related to microbial science on a worldwide basis are also considered.

Special emphasis is given to issues that go beyond the traditional boundaries of a microbiology journal: the state-of-the art of microbiology in different regions of the world, the research activities and interests of outstanding microbiologists, the role of microbiology in society and education, new findings from the frontiers of current research, et cetera. Critical reviews of new books on microbiology, related sciences, and social aspects of science are also welcome. International Microbiology offers high-quality, internationally based information, short publication times, complete copy editing, and online publication available to any reader prior to distribution of the printed journal.

International Microbiology acknowledges the assistance of the Microbiology Section of the Catalan Society for Biology (SCB), an affiliated society of the Institute for Catalan Studies (IEC), the national academy of sciences and humanities of the Catalan countries.
Acknowledgement of Institutional Subscriptions

INTERNATIONAL MICROBIOLOGY staunchly supports the policy of open access (Open Access Initiative, see Int. Microbiol. 7:157-161). Thus, the journal recognizes the help received from the many institutions and centers that pay for a subscription—in spite of the possibility to download complete and current issues of the journal free of charge. We would therefore like to thank those entities. Their generous contribution, together with the efforts of the many individuals involved in preparing each issue of INTERNATIONAL MICROBIOLOGY, makes publication of the journal possible and plays an important role in improving and expanding the field of microbiology in the world. Some of those institutions and centers are:

Instructions for authors

General Information

The journal publishes two kinds of papers: Articles and Complements. Articles are original research papers, research notes, or critical reviews on a specific topic. Reviews and research papers should not exceed 12 printed pages, including tables and figures. Research notes should not exceed 4 printed pages. Complements are short papers dealing with microbiological subjects of broad interest: editorials, perspectives, opinions, book reviews, obituaries, etc.

Manuscripts in electronic form. Authors must send their manuscripts, only in electronic form, by e-mail. Large files should be compressed. Manuscripts should be e-mailed to:

E-mail: int.microbio@telefonica.net
Tel. +34-93482373. Fax +34-93341079
URL: http://www.im.microbios.org

Manuscripts should be prepared in accordance with the journal’s accepted practice, form, and content; they should be checked carefully to exclude the need for corrections in proof. Manuscripts should be typed double-spaced and with wide margins. The author should mark where figures and tables are to be inserted.

Arrangement of research articles

All pages must be numbered consecutively, starting with the title page.

The title page should comprise: title of paper, first name(s) and surname(s) of author(s), location(s), the address to which proofs are to be sent, telephone and fax numbers and e-mail address of the corresponding author.

The Summary should be informative and completely comprehensible, briefly present the topic, state the scope of the experiments, indicate significant data, and point out major findings and conclusions. Summaries are used by information retrieval systems. The Summary should not exceed 200 words. Standard nomenclature should be used and abbreviations should be avoided or defined. No references should be cited. Immediately following the Summary, up to five Keywords should be supplied; these will be used for indexing purposes.

The Introduction should be concise and define the objectives of the work in relation to other work done in the same field. It should not give an exhaustive review of the literature.

Materials and methods should provide sufficient detail to allow the experiments to be reproduced. However, only truly new procedures should be described in detail; previously published procedures should be cited, and important modifications of published procedures should be mentioned briefly. The suppliers of chemicals and equipment should be indicated if this might affect the results. Subheadings may be used. Statistical techniques used must be specified.

Results should be presented with clarity and precision. The results should be written in the past tense when describing findings in the author’s experiments. Previously published findings should be written in the present tense. Results should be explained, but largely without referring to the literature.

The Discussion should be confined to interpretation of the results (not to recapitulating them), also in light of the pertinent literature on the subject. When appropriate, the Results and Discussion sections can be combined. This will be the case in research notes.

Acknowledgements should be presented after the Discussion section. Personal acknowledgements should only be made with the permission of the person(s) named.

References. The list of references should include only works that are cited in the text and that have been published or accepted for publication. Unpublished work in preparation, Ph.D. and Masters theses, etc., should be mentioned in the text only, in parentheses. The author(s) must obtain written permission for the citation of a personal communication or other researchers’ unpublished results. References cited in the text should be numbered and placed within square brackets, referring to an alphabetized list at the end of the paper. References should be in the following style:

Citation of articles that have appeared in electronic journals is allowed if access to them is unlimited and their URL or DOI is supplied.

Further information

Abbreviations and units. Abbreviations and symbols should follow the recommendations of the IUPAC-IUB Commission. Information can be obtained at http://www.chem.qmw.ac.uk/iupac/.

Common abbreviations such as cDNA, NADH and PCR need not to be defined. Non-standard abbreviation should be defined at first mention in the Summary and again in the main body of the text and used consistently thereafter. SI units should be used throughout.

Nomenclature of organisms. Genus and species names must be in italics. Each genus should be written out in full in the title and at first mention in the text. Thereafter, the genus may be abbreviated, provided there is no danger of confusion with other genera not discussed in the paper.

Bacterial names should follow the instructions to authors of the International Journal of Systematic and Evolutionary Microbiology. Nomenclature of protists should follow the Handbook of Protota (Jones and Bartlett, Boston).

Figures and tables. These should be restricted to the minimum needed to clarify the text; a total number (F + T) of five is recommended. Neither tables nor figures should be used to present results that can be described with a short statement in the text. They should also not be integrated into the text.

Figure legends must be typed double-spaced on a separate page and appended to the text. Photographs should be well contrasted and not exceed the printing area (17.6 x 23.6 cm). Magnification of micrographs should be shown by a bar marker. For color illustrations, the authors will be expected to pay the extra costs of 600 euros plus 16% VAT per article. Color figures may be accepted for use on the cover of the issue in which the paper will appear.

Tables must be numbered consecutively with Arabic numerals and submitted separately from the text at the end of the paper. Tables may be edited to permit more compact typesetting. The publisher reserves the right to reduce or enlarge figures and tables.

Editorial charges. If an accepted manuscript requires extensive editorial work, authors will be requested to pay an extra editorial charge. The acceptance of a paper does, however, not depend on the author’s ability to pay this charge. If the research was not funded, authors may send the Editor-in-Chief a written request for charges to be waived.

Complements. These papers serve to express or clarify the author’s point of view on a microbiological topic of international relevance or to comment on a recent event or a recently published article or book. These papers should not exceed 6 printed pages. References may be cited if necessary.

Book reviews. Reviews of recent books of special interest in the field of both prokaryotic and eukaryotic microbiology, and the history and sociology of microbiology and science in general are welcome. Please contact the Editorial Office for details.

Proofs. Proofreading is the responsibility of the author. Only typesetting errors should be corrected at this stage. Corrections of errors that were present in the original manuscript will be subject to additional charges. The corrected page proofs must be returned by the date requested.

Reprints. Reprints (in multiples of 50) may be ordered from the publisher at the time the corresponding author returns the proofs. The cost of the reprints will be indicated by the publisher.
